ORDERING INFORMATION

Device	Package
LM339D	SOP 14
LM339N	DIP 14

DESCRIPTION

The LM339 consists of four independent voltage comparators. These were designed specifically to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage. The outputs can be connected to other open-collector outputs to achieve wired-AND relationships.

* Full range (MIN to MAX), for the LM339 is - 40 °C to 125 °C. All characteristics are measured with zero common-mode input voltage unless otherwise specified.

** The voltage at either input or common-mode should not be allowed to go negative by more than 0.3V. The upper end of the common-mode voltage range is $V_{CC} - 1.5V$, but either or both inputs can go to 30V without damage.

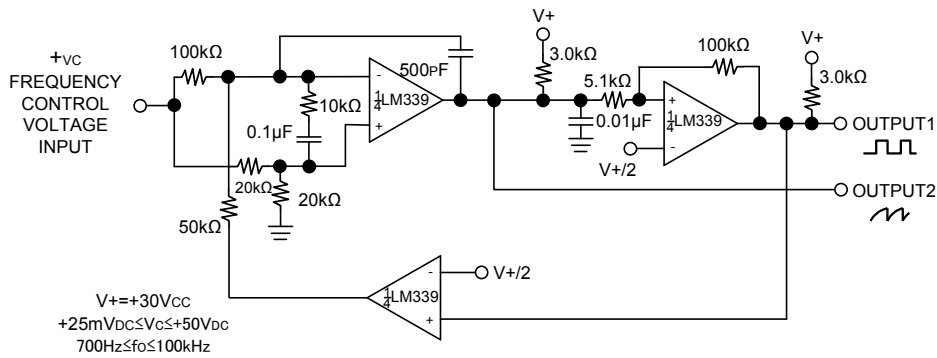

SWITCHING CHARACTERISTICS, $V_{CC}=5V, T_A=25^\circ C$
